

ReadMe - Fire Extinguishers & Fire FX Pack

Overview

This Unity asset combines the high-quality 3D models from the Fire Extinguishers Pack available at: <https://assetstore.unity.com/packages/3d/props/industrial/fire-extinguishers-316676> with custom-made fire and extinguisher spray effects. All assets are optimized for real-time applications.

Package Contents

- 3D models of various fire extinguishers (from the original asset).
- Realistic fire VFX (optimized for performance).
- Optimized extinguisher spray effects (CO₂, foam, water, powder).
- High-quality PBR textures and materials.
- Drag-and-drop prefabs for quick implementation.

Optimization

All visual effects (fire and extinguisher spray) are built with performance in mind. They utilize efficient particle systems and texture atlases to minimize draw calls and GPU usage. Textures are optimized for real-time performance with proper compression settings and LOD support.

Usage Instructions

1. Import the package into your Unity project.
2. Locate the prefabs under `Assets/FireExtinguisherPack/Prefabs`.
3. Drag and drop any extinguisher model into your scene.
4. Attach the desired spray VFX to the nozzle (available under `Assets/FireFX/`).
5. Use the provided fire VFX prefabs to create realistic fire scenarios.

Compatibility

Tested with Unity 2021.3 LTS and newer versions. Supports Built-in, URP, and HDRP (some adjustments may be required).
